

BETTER THAN AVERAGE CRAB CRACKER AND SPLITTER SETS: Works great for crab and seafood of all kinds without the hassle of using traditional crab and lobster crackers and picks. Our unique ergonomically designed, bent handle allows you to crack claws easily without pinching your own knuckles! Unlike similar products on the market, we use a plastic base to strengthen the shucker and protect your surfaces from scratches and damage often caused by regular metal bases.

Effortlessly de-shell stone crab, hard shell king crab legs and lobster claws with the Shucker, the professional grade crab cracker. Traditional mallets, crab leg crackers and other tools crush the shell embedding splinters into the meat of the crab and lobster. The Shucker crab and lobster claw cracker sits sturdily on the counter allowing you to apply broad, even pressure to split the crab claw shell with ease, leaving the meat intact with no shards of shell debris in the crab meat. This tool for seafood is a good quality, well-made product made in the USA. It's just what you need for getting the meat out! Simple as 1, 2, 3...it works great and lets you focus on what's most important, eating crab. Crack the stone crab claw and each knuckle under the cracker bar and shells are then easily removed. Make this stone crab season your most enjoyable yet. No seafood picks or forks necessary.
