## Instructions

**A.** Gear puller is often used in mechanical maintenance.

**B.** It is mainly used to remove the damaged bearings from the shaft along the axis.

- C.** It mainly comprises a rotating handle, a screw rod, and a pulling claw. There are two claws, three claws, the main size of the length of the pull claw, pull claw spacing, and screw length, to adapt to different diameters and different coaxial installation depths of the bearing.
- D.** When in use, the screw center is positioned at the shaft end center hole to adjust the position of the pulling claw so that the pulling claw is hooked to the outer ring of the bearing, and the rotating handle makes the pulling claw drive the bearing to move outward along the axis to remove.
